

WHITE CONVEYORS
INCORPORATED

Garment Storage Conveyors

MAXIMUM STORAGE

If you do not have the ceiling height for an Up 'N' Down Conveyor, this model provides the maximum density of storage for long and short garments. Short garments can be double tiered, and a section is provided for orders with long garments.

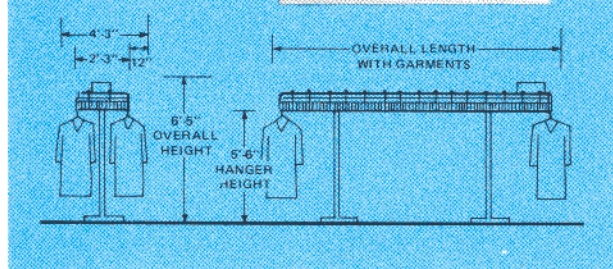

Product Number	Total Hanging Slots	(Short Orders)	Total Hanging Slots Long & Short Orders	Hanging Capacity	Overall Length with Garments

One foot control furnished.

MOST POPULAR CONVEYOR

Here's the most popular conveyor in America today. It features a specially designed power drive that brings the average order to your counter in 8 to 10 seconds. The conveyor revolves electrically, in either direction ... operated automatically (by Series 540 Control) or manually (hand or foot controls). The "Stor-U-Veyor" features heavy-duty construction throughout ... is actually built for a lifetime of smooth, trouble-free operation. Slots are provided for the convenient identification of garments under any numbering system.

GAW1000	1000	100'0"	51'0"

One hand switch furnished.

UTILIZE YOUR CUBIC CAPACITY

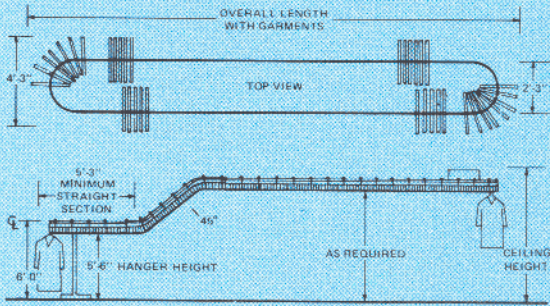

Utilize the cubic capacity of your store with an Up 'N' Down storage conveyor that goes up and down at a 45° angle. Garments are loaded at the "nose" of the conveyor, and stored off the floor, creating extra floor space. At the flick of a switch, the order you need is brought to the counter. Use the entire cubic capacity of your store with an Up 'N' Down.

Model & No. of Slots	Length of Hanging Capacity	Overall Length with Garments*

One hand switch furnished.

USES THE LEAST AMOUNT OF FLOOR SPACE

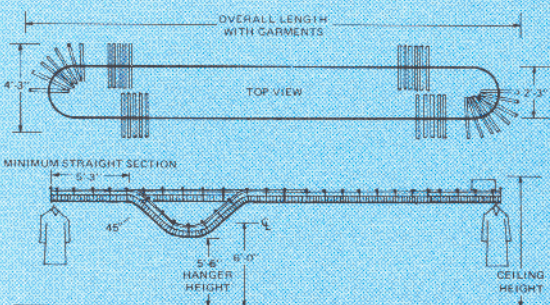

The V-Dip Conveyor uses only half the floor space of the Up 'N' Down conveyor. Only one section of the conveyor is used by the operator for unloading or loading, and that point can be placed almost anywhere. Use your available basement or ceiling by making your V-Dip Conveyor bend and twist up above to "fill" those unused "waste space" areas.

ASSEMBLY CONVEYOR

This remarkable conveyor eliminates your assembly "bottle-necks." It saves space and reduces worker fatigue. It gives you fast, automatic assembly operation. A White Assembly Conveyor eliminates the miles of walking "back and forth" that is so typical of most assembly operations. The conveyor does all the work for you! It revolves electrically ... bringing the desired assembly position to operator in seconds.

MODEL AP—For use with clip boards.

STANDARD EQUIPMENT

Electrical 115 Volt; 1 phase, 60 cycle
 Controls Bi-Directional Hand or Foot switch; as indicated
 Wiring Pre-wired for primary supply connection
 Speed 75 ft./min.
 Colors Black is standard (other colors quoted by request)

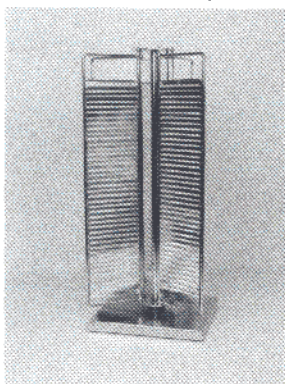

SPECIAL SHAPES

White Conveyors are available in a wide variety of special shapes. You can "design your own conveyor" to fit most any length or shape by using our standard "modular" sections. Here are some typical shapes.

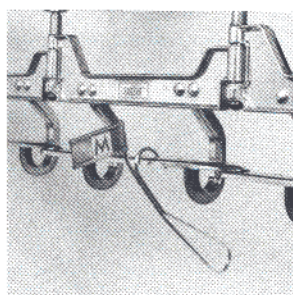

Many additional sizes & configurations of conveyors are available. Consult your White representative with your specific dimensions.

OPTIONAL EQUIPMENT

U-FILE. Available in counter or wall mount.

RA 24 IDENTIFICATION MARKER. For use in separating garments on Consec-U-Veyor system.

HAND SWITCH. Mounted on arm extending from conveyor.

SERIES 540 CONTROL. Selects garment automatically by shortest route. All solid state.

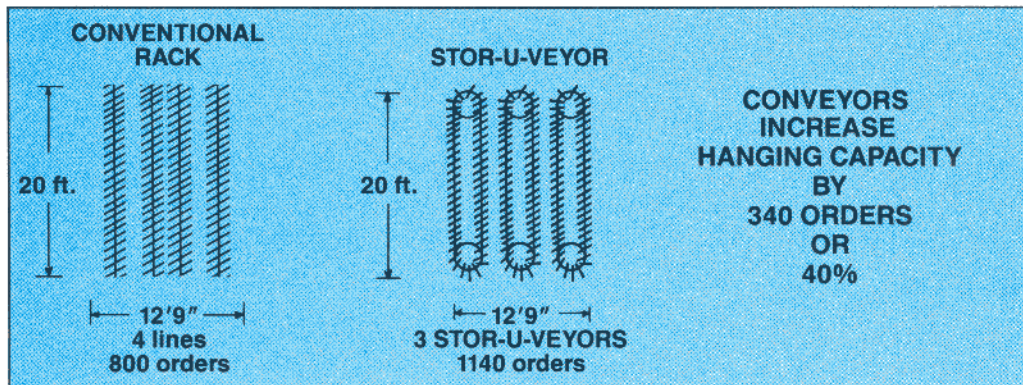

FOOT SWITCH. Includes 25 ft. of cord.

White Conveyor Systems

SAVE SPACE & LABOR WITH WHITE CONVEYOR SYSTEMS AT LEAST 40% MORE HANGING CAPACITY

With floor level conveyors you can actually gain 40% more hanging capacity in your present call office area. Conveyors completely eliminate the need for aisle space. As you see below, with conventional rail it is possible to get four lines in a space of 12'

-9" holding 800 orders. With three Stor-U-Veyors in the same space the capacity is increased to 1140 orders. This results in additional capacity of 340 orders, or an increase of 40%.

In addition to increased capacity White Conveyors provide these other benefits:

- Call office employees never have to leave the counter or customers.
- No more wasted time searching for orders.
- No walking means less fatigue and better

morale for employees.

- Faster & more efficient service.
- Serve more customers with fewer people. With the conveyor doing the walking & searching, your call office employees are always free to service the customers at the counter.

CONSTRUCTION FEATURES

1. Modular construction, to facilitate expansion of conveyor length and capacity at a future date.
2. All rotating components use shielded ball bearings, minimizing the need for lubrication and the possibility of lubricant leakage.
3. Conveyor links are supported from yokes with nylon ball bearing wheels to insure quiet operation.
4. Drive train includes a clutch for smooth, rapid starts.
5. Power from gearbox to main drive sprocket is transmitted by roller chain. This eliminates much of the strain on gearbox oil seals created by constantly reversing conveyor movements.
6. In the event of a power failure, the drive on floor model conveyors can be easily uncoupled for emergency manual operation of the conveyor.
7. Conveyors are approved by ETL Testing Laboratories; and are wired in accordance with National Electric Code Standards.
